ATTENTION FRAUD IS UNVERIFIABLE

Ad platforms report their own numbers. Brands pay for "impressions" they cannot check — and checking harder means building surveillance databases of **who watched what**.

> **Verification today = trust the platform, or violate privacy.**
> **There is no third option on the market.**

SLIDE NUMBERS ARE ILLUSTRATIVE OF THE SHAPE OF THE PROBLEM, NOT A CLAIM ABOUT ANY REAL CAMPAIGN.

PLATFORM CLAIMS

1,204,882

impressions · CPM $4.10 · 71% viewability · 100% human

INDEPENDENTLY PROVABLE

0

facts the buyer can check without the platform's word — or a profile of the viewer.

PROVE THE FACT. HIDE THE PERSON.

Slopstream proves an ad slot **met a verified-attention threshold** without revealing who watched, what they answered, or building a profiling database.

A	B	C
BRANDS CAN'T SEE VIEWERS	VIEWERS CAN'T BE LINKED ACROSS SEGMENTS	RIVAL BRANDS CAN'T SEE SPEND

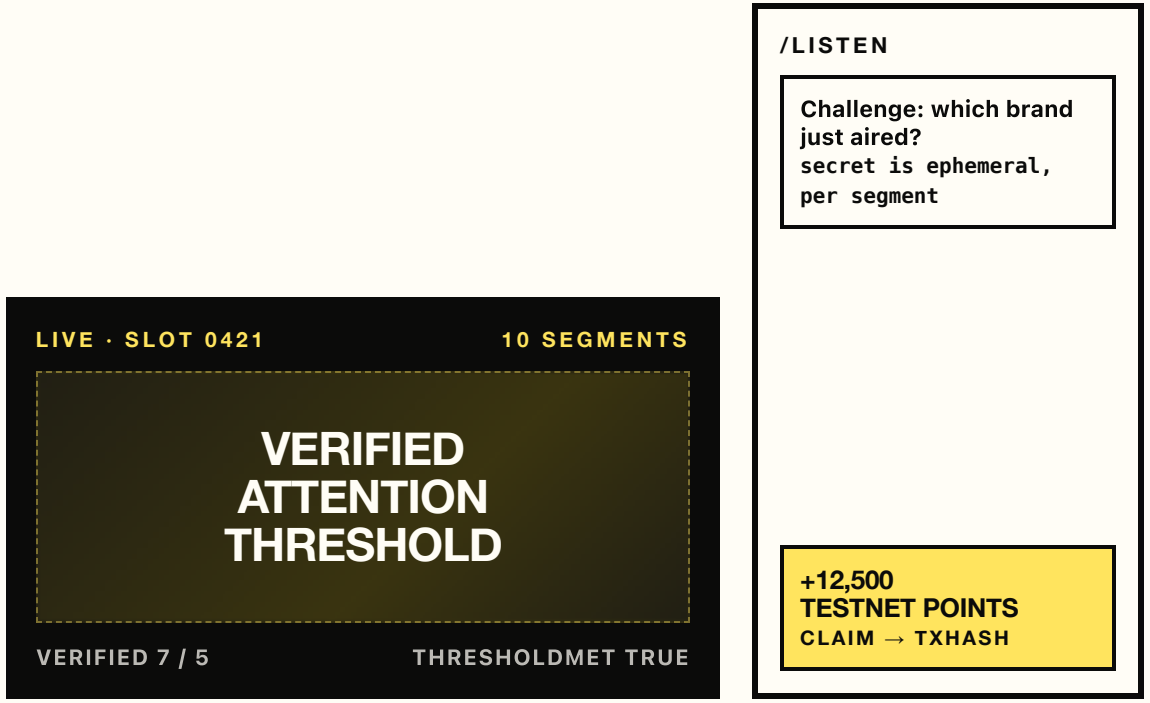

STRIPE MOVES DOLLARS. MIDNIGHT PROVES FACTS.

A LIVE STREAM WHERE THE PROOF IS THE PRODUCT

An infinite AI-generated ad stream. Brands bid on slots, listeners join by QR, answer a challenge during the slot, and are paid from the reward pool — **80/20 listeners / platform**. Every slot ends in a ledger fact, not a screenshot.

BID · GENERATE · PLAY · CHALLENGE · PROVE ON-CHAIN · CLEAR 80/20

6-SECOND LOOP OF THE BIG-SCREEN UI + LISTENER PHONE.

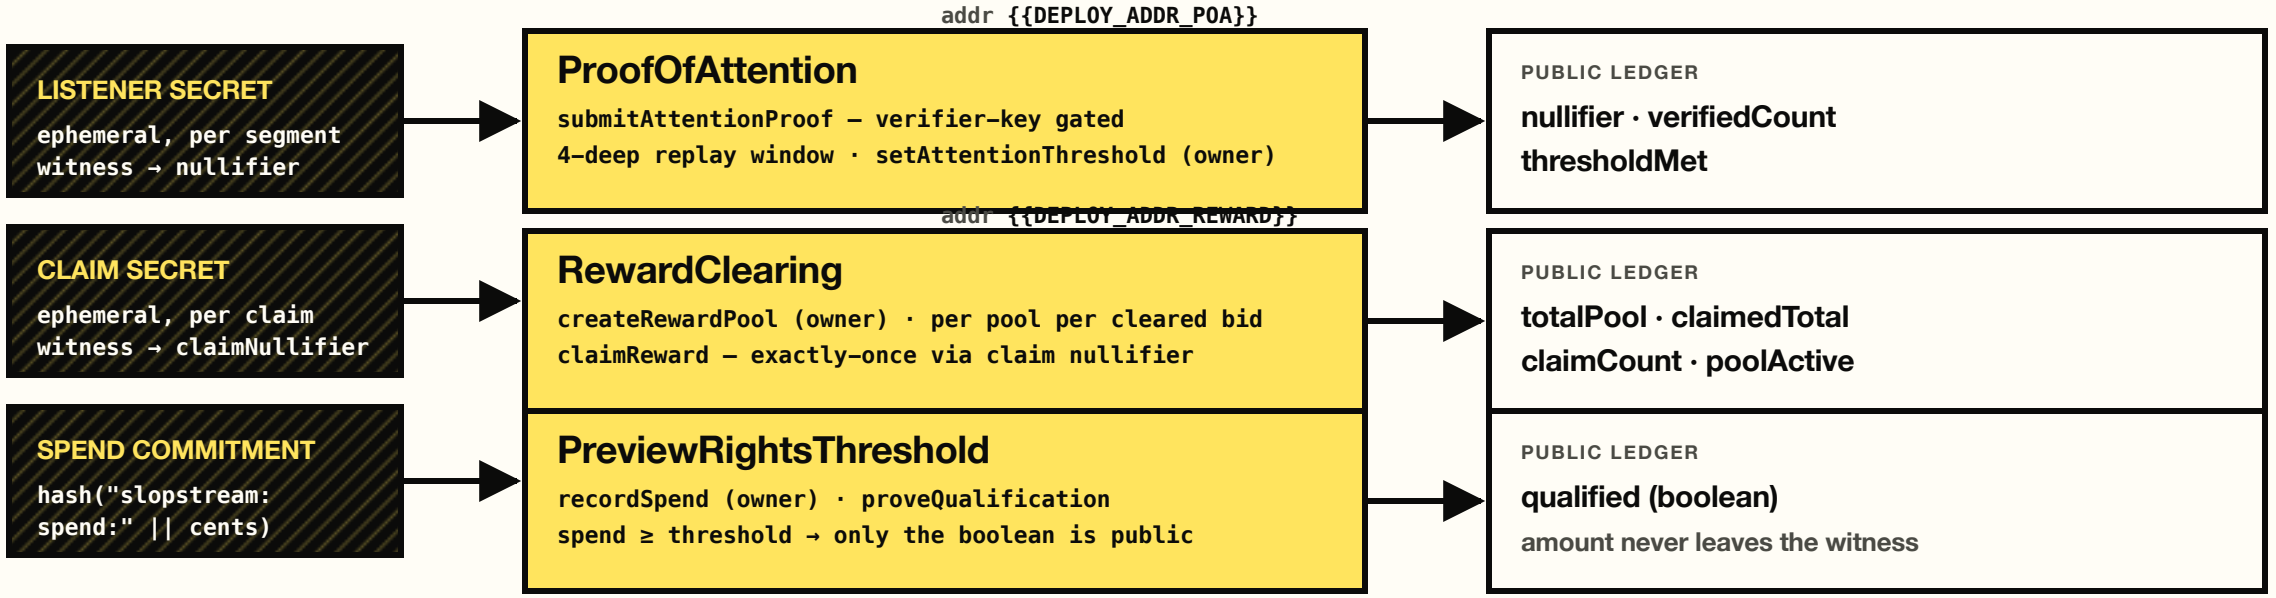

COUNTS AND PROOFS ON THE HUD — NEVER IDENTITIES.

3 DEPLOYED

PREPROD

THREE COMPACT CONTRACTS, LIVE ON MIDNIGHT PREPROD

PUBLIC LEDGER FACT · PRIVATE WITNESS / PRIVATE STATE · NEVER ON-CHAIN

DUAL LEDGER, DOING EXACTLY WHAT IT IS FOR

PRIVATE — WITNESS	PUBLIC — LEDGER	NEVER ON-CHAIN
LISTENER SECRET ephemeral, per listener per segment; lives only in private state, rotated every submission	**NULLIFIERS** replay-protecting, unlinkable to a person	**IDENTITY** no account, no device graph, no profile store
CLAIM SECRET ephemeral, per claim; binds the claim to one consumed attention nullifier	**VERIFIEDCOUNT** aggregate only — no viewer rows	**ANSWERS** grading is private to the verifier
BRAND'S EXACT SPEND `hash("slopstream:spend:" || cents)` — commitment only, amount never lands	**THRESHOLDMET** the fact the buyer is paying for	**WEIGHTS** per-listener reward share stays off-chain by design
	QUALIFIED FLAG boolean; plus pool totals + claim count	**BUDGETS** campaign spend and bids are not disclosed to rivals

Segment / challenge binding is proven **in-circuit**, never disclosed. Three facts go public; nothing identifies a human.

/VERIFY

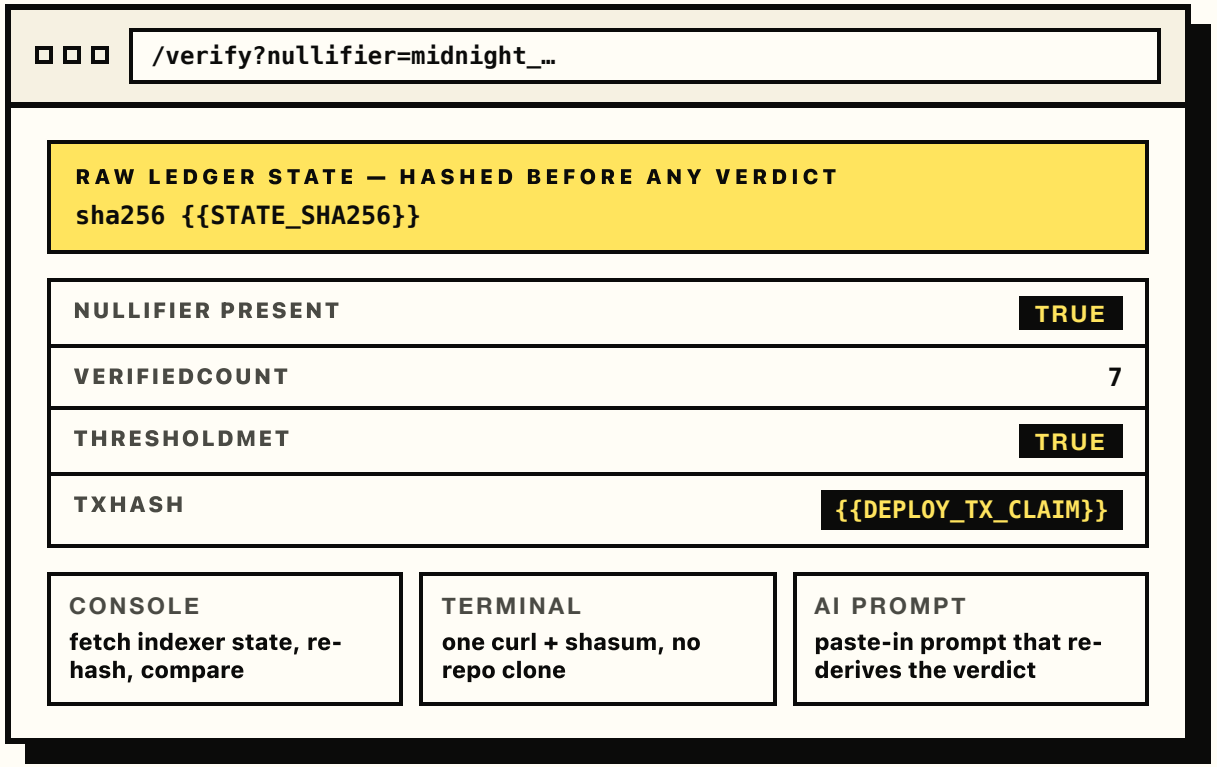

PUBLIC

VERIFY IT YOURSELF. RUN ZERO OF OUR CODE.

Every midnight receipt links to `/verify?nullifier=…`. The page reads **public preprod indexer state**, prints the raw state **SHA-256 before the verdict**, and offers a console snippet, a terminal one-liner and an AI prompt — three independent paths to the same answer.

> **"No record" is only ever shown after a successful read.** A failed or unauthenticated read can never render as absence — that is the whole point of the page.

CONTRACT {{DEPLOY_ADDR_POA}} CLAIM TX {{DEPLOY_TX_CLAIM}}

MOCK OF THE SHIPPED PAGE. JUDGE PATH: JUDGES.MD + PROOF.MD.

SUBMITTED

TODAY

WAVE 1 → WAVE 2 — WHAT WE SHIPPED THIS WAVE

AREA	WAVE 1 (COMPILED, NOT DEPLOYED)	WAVE 2 — THIS SUBMISSION
CONTRACTS	0 deployed. `ProofOfAttention` compiled; preprod deploy attempted, wallet sync stalled before funds were visible.	**3 DEPLOYED TO MIDNIGHT PREPROD — `ProofOfAttention` `{{DEPLOY_ADDR_POA}}`, `RewardClearing` `{{DEPLOY_ADDR_REWARD}}`, `PreviewRightsThreshold`.**
CIRCUITS	3 exported (PoA only).	**10 EXPORTED CIRCUITS across the three contracts, bindings + zkir + prover/verifier keys committed.**
CALLER GATING	`submitAttentionProof` was **not gated** — a documented hole.	**HOLE CLOSED: verifier-key gated `owner == publicKey(localSecretKey(), sequence)`.**
RECEIPTS	`verifierMode` label only.	**`txHash` threaded verifier → api → shared → UI; `/verify?nullifier=` deep-link.**
VERIFICATION	None — take our word.	**`/VERIFY` PUBLIC SURFACE: raw state SHA-256 before the verdict + independent console / terminal / AI checks.**
TESTS	verifier + api vitest only.	**18/18 zero-install circuit-mirror tests in `contracts/test/*.test.mjs` (`node --test`).**
NETWORK	Midnight-hosted preprod indexer / RPC.	**MIGRATED TO BLOCKFROST + `?project_id=` auth — the hosted endpoints went HTTP 410 ON 2026-10-09, mid-wave.**

PREPROD,
NOT MAINNET

WHAT IS TRUE TODAY — AND WHAT WE SAY PLAINLY ABOUT IT

WAVE 1

STUB LOOP

bid → generate → play → challenge → receipt → 80/20 clearing. `ProofOfAttention` compiled, **not deployed**; wallet sync stalled.

WAVE 2 — SUBMITTED TODAY

3 CONTRACTS LIVE ON PREPROD

Reward clearing + spend-threshold circuits, verifier-key gating, `txHash` provenance, `/verify`, 18/18 mirror tests, Blockfrost migration.

NEXT

ON-CHAIN BID CLEARING

`BidClearing` (declared sketch), DUST-funded listener wallets, pilot: 1 live brand + 10 listeners on video. Mainnet opened permissionless deploy 2026-10-02; bump midnight-js 5.x before the v8→v9 fork reaches preprod — our v8-compiled contracts keep working, no recompile.

HONEST LIMITS — STATED ON THE PAGE

- **BACKEND LEDGER IS AUTHORITATIVE** for clearing during the hackathon; on-chain records are corroborating evidence + non-repudiation, not independent settlement. Yet.
- **BIDCLEARING IS A DECLARED SKETCH**, not a hidden one — we say so rather than ship a hollow contract.
- **NOT AUDITED. PREPROD, NOT MAINNET.**
- **LISTENER REWARDS ARE LEDGER POINTS.** No USD value promise, nothing transferable — no money-transmitter framing.
- **ANTI-SYBIL IS REAL BUT NOT PERFECT**: dual 4-deep replay windows, per-session commitment, claim rate limits. Non-trivial, not Sybil-proof.

THE ASK

- Repo: `github.com/sneldao/slopstream`
- **5-MINUTE JUDGE PATH** — `node --test contracts/test/*.test.mjs`, then `/verify` with a receipt nullifier.
- Feedback wanted on on-chain clearing shape + nullifier unlinkability claims.
